

# Design a URL Shortener - Step 2: High-Level Design

## 1. Overview

- Design **REST-style APIs** for communication between client and server

## 2. API Endpoints

### 1. URL Shortening API

None

**POST** /api/v1/data/shorten

#### Request

JSON

```
{ "longUrl": "longURLString" }
```

#### Response

None

**shortURL**

## 2. URL Redirecting API

None

GET /api/v1/shortUrl

### Response

None

longURL (for HTTP redirection)

## 3. Key Takeaway

System provides two core operations:

- **POST → Create short URL**
- **GET → Redirect to original URL**
